

AIS Packaging Materials Datasheet

AIS uses minimal packaging materials in the transport of product to its final destination. Below is a breakdown of packaging materials used to assist with recycling efforts.

Product	Packaging Used
ALL	All AIS product is palletized as efficiently as possible on wood pallets. Each complete pallet is shrink-wrapped with a heavy plastic material to aid in minimizing shipping damage.
Matrix Frames	Minimal recycled cardboard inserts are used to protect edge of frame. Minimal tape is used to hold cardboard in place. Frames are then strapped to a skid using a plastic strapping.
Matrix Tiles	Matrix tiles ship in recycled cardboard boxes. Tape is used to close the boxes.
MWall/A02/DiVi Panels	Minimal recycled cardboard inserts to protect edge of panel. Light plastic shrink wrap is applied to top and bottom of panels to hold cardboard in place. A plastic strapping is used to secure these to a skid.
MWall/A02/DiVi Glass Panels	Glass Panels are wrapped similar to a regular panel. In addition to this, a plastic bag is placed over the entire panel to protect the glass from scratching.
Painted Components	Painted components are boxed using recycled cardboard. Plastic is commonly wrapped around parts to help protect finish.
Electrical Components	Electrical components are combined and shipped in recycled cardboard boxes. Some smaller components may be placed in plastic bags within a box.
Hardware	Hardware is combined and shipped in recycled cardboard boxes. Some items may be separated in individual plastic bags and placed in the box.
Worksurfaces	Corrugated cardboard is applied to protect the top and bottom of surface. This is then stretch wrapped and bubble wrapped. Metal strapping is used to hold surfaces to pallet.
AIS Pedestals, Laterals and Storage Towers	Each item is individually boxed using a recycled corrugated cardboard. Within the box a foam bag is used to protect units from rubbing. Styrofoam is placed on top, bottom and sides to prevent damage.
Element Chairs	Chairs are boxed individually using a recycled corrugated cardboard. Hardware is packaged altogether in a preformed plastic sleeve. Seat cushion is placed in a plastic bag to protect the material. Small components are individually boxed.
