Note: 66" & 72" wide screens – if applying directional fabrics they will need to be railroaded for application. If using a COM fabric that is 54" wide, any screen over 48" wide would need to have the fabric railroaded as well.

C.O.M. Fabric Policy

- It is mandatory that you work directly with your AIS Customer Service Representative for all COM related testing and orders. They will provide all necessary forms to you, as well as work with you with regard to sending in correct yardage and where to send it, along with necessary RA# or #s. Please note an RA must be submitted along with the fabric for testing, as well as an RA created for an actual order.
- **Please Note:** A three to five yard sample is required for testing and approval for use on all monolithic panel systems. A one yard sample is required for testing and approval on Divi Insert Tiles, Matrix Tiles, flipper doors and tackboards. We may be able to test upholstery fabrics with a swatch, your Customer Service Representative will advise based on the fabric being tested; otherwise a 1 yard sample must be submitted for testing. Results take 48 - 72 hours.
- Customer Service must be advised as to the width of the fabric rolls being supplied (54"W or 60"W). Customer Service must also be advised if the fabric has a backer.
- Yardage required for the job must be calculated by an AIS Customer Service Rep.
- Once AIS has approved the COM fabric, a fabric sample needs to be marked by the dealer with "Front", "Top", and "Bottom", to be sure fabric is applied correctly. The fabric sample then needs to be attached to a COM Fabric Dealer Form and forwarded to AIS Customer Service. [The COM Fabric Dealer Form may be downloaded or printed here.](#)
- Fabrics may be discontinued or obsolete without notice.
- Contact AIS Customer Service with any questions regarding fabric availability.
- All directional fabric will be railroaded.

Paint, Edgeband, Laminate and Tempered Glass Options

MATRIX PAINT OPTIONS

Custom Paints

- Minimum order size for any custom color is \$75,000 list. Extended lead-time will apply.
- Any color not shown on Quick Ship, Standard Grade A, B or C will be considered custom.
- A \$450 net paint match fee will be assessed following receipt of (2) 5"x5" samples of paint being matched.
- Minimum order size for any custom color is \$75,000.00 list. Extended lead-time will apply.
- Additionally, Grade C paint up-charges will be applied to all applicable products on the order.
- **Important Custom Paint Note:** Most paint match pricing can be covered by the Grade C up-charge in the catalog, however the final pricing can only be determined after the paint is matched and a product list is provided to AIS customer service. An additional fee may apply based on job size and paint color.

TEMPERED GLASS OPTIONS

Name	Panels/Frame/Tiles/ Screens	1/4" Thick Frameless Glass	3/8" Thick Frameless Glass
Clear	Y	Y	Y
Frosted	Y	Y	Y
Aqui	N	N	Y
Bronze Tint	Y	Y	N

Matrix Product Details

Frames

- Full steel frame system. Frame thickness is 3.25".
- Available frame heights are 34", 42", 50", 58", 66" and 82" high.
- Available frame widths are 24", 30", 36", 42", and 48" wide.
- All frames, including door frames, can accommodate stack-on frames. Double stacking is allowed up to 48". ie: (2) 24"H stack-on frames stacked on top of a 82"H frame give the maximum height of 130"H.
- Available stack-on frame heights are 8", 16" and 24" high. Available stack-on frame widths are 24", 30", 36", 42", and 48" wide.
- Frame has a slotted standard in 1" increments at each edge to accommodate hanging components.
- Frames include one topcap, 1/4 - 20 x 4" Hex head bolts to connect to other frames in a straight line, and two top and bottom tile retainers.
- Topcap is metal and available in a radius or linear profile. Radius profile topcaps may be specified painted. Linear profile topcaps may be specified painted.
- 1/4 - 20 x 4" Hex head bolts along with Tinnerman nuts (factory mounted to the frames) produce a rigid straight line connection.
- Top tile retainers are metal. Retainer is field installed and mounting screws are supplied.
- Bottom tile retainer is metal and available in a radius or linear profile. Retainer is field installed and mounting screws are supplied.
- Electrical chase holes are located every 8" on the frame to accommodate data and electrical cables. Electrical can be mounted at any height within the frame in increments of 8". Each electrical location can accommodate up to two powerway assemblies.
- Up to 16 Cat 6 cables can fit into the topcap lay-in channel on the frame which is laterally continuous and unobstructed.
- One Carpet gripper is shipped with every four frames.
- Every frame subtracts two mid-tile retainers from the combined total of mid-tile retainers on each order that includes both frames and tiles. For example, an order with one frame and eight tiles will receive six mid-tile retainers, which is the appropriate amount required to "completely dress" both sides of a frame. However, if both sides of a frame are not being dressed, or if the frames and tiles are specified for supplemental add-on orders where each tile is required to have a mid-tile retainer, such retainers must be ordered separately.

Connectors

- Connectors create 90°, 120°, and 135° space planning and connect frames with 1/4 - 20 x 2 1/4" Hex head bolts via Tinnerman nuts (factory installed) on the connector post.
- Available in 2-Way, 3-Way, and 4-Ways in 34", 42", 50", 58", 66" and 82" high.
- 180° straight line topcap connectors are only required for radius profile topcaps and are specified separately. Available in painted metal only. Linear profile topcaps do not require a topcap connector.
- 2-Way connectors are available in either 90°, 120°, or 135° and ship assembled with metal vertical cover and connector topcap. Available in a radius or linear profile.
- 3-Way connectors are available in either 90° or 120° and ship assembled with a metal vertical cover (90° only) and connector topcap. Available in a radius or linear profile.
- 4-Way connectors connect frames at 90° and ship assembled with connector topcap. Available in a radius or linear profile. 4-Way connectors do not require a vertical cover.
- Stack-on connectors are required when connecting stack-on frames in a 2-Way (90°, 120°, 135°), 3-Way (90°, 120°), or 4-Way scenario. Stack-on connectors connect the same way as standard connectors with 1/4 - 20 x 2 1/4" Hex head bolts via Tinnerman nuts (factory installed) on the connector post. Stack-on connectors do not include vertical covers or connector topcaps. A separate vertical cover needs to be specified corresponding to the overall height of the connection. [ie: When adding (2) 24"H stack-on frames to (2) 66"H frames at a 2-Way connection, a 24"H 2-Way stack-on connector needs to be specified. Because the overall height of the connection is now 90", a new 90"H vertical cover needs to be specified. The existing 66" vertical cover is no longer used and the connector topcap from the original 66"H connector is moved to the top of the stack-on connector.]
- Panel end caps are required to finish the side of a frame in an end of run situation where no other panels are to be connected. Available heights are 34", 42", 50", 58", 66", 74", 82", 90", 98" and 106". In stack-on situations at an end of run, the correct height panel end cap needs to be specified. [ie: When adding a 24"H stack-on frame to a 66"H frame at an end of run, a 90"H panel end cap needs to be specified.] Available in radius or linear profile. Radius profile panel end caps may be specified painted. Linear profile panel end caps may be specified painted.
- Straight line HiLo caps are required when frame heights change height in a straight line. [ie: When a 50"H frame is connected to a 66"H frame, a 16" straight line HiLo cap needs to be specified to cover the exposed frame on the 66"H frame.] Available in a radius or linear profile. Radius profile straight line HiLo caps may be specified painted. Linear profile straight line HiLo caps may be specified painted.
- Corner HiLo caps are required when frame heights change at a 2-Way, 3-Way, or 4-Way connection [ie: When a 50"H frame and a 66" frame are connected at a 2-Way connector, a 16" corner HiLo needs to be specified to cover the exposed connector post above the 50"H frame.] Available in a radius or linear profile. Radius profile corner HiLo caps may be specified painted. Linear profile corner HiLo caps may be specified painted.
- Stack-on vertical covers are only required when connectors extend beyond 108"H. Available in a radius or linear profile. Radius profile stack-on vertical covers may be specified painted. Linear profile stack-on vertical covers may be specified painted.
- Wall mount connectors are required when mounting frames perpendicular to a fixed wall. Available heights are 34", 42", 50", 58", 66", 74", 82", 90", 98", and 106". Available in a radius or linear profile. Radius profile wall mount topcap filler may be specified painted. Linear profile wall mount connectors also require width specification because it includes a topcap to replace the existing topcap on the frame being wall mounted. This is due to the 1" of panel creep created by the wall mount. Linear profile topcaps may be specified painted.

Electrical

- 8 Wire 4 circuit electrical system contains four circuits. Each circuit is rated at 20 amps/120 volts maximum.
- Circuit 1, Circuit 2 and Circuit 3 are served by a system neutral and an equipment ground. Circuit 4 is dedicated and is served by its own neutral and ground.
- Electrical/data raceway channels are located at each 8" increment along the system frame and can accommodate either a single or double powerway.
- Each duplex outlet contains two single receptacles (places to plug into) of the same circuit and are specified separately from powerways. Duplex outlets are standard 15 amp outlets. For 20 amp outlets, call AIS Customer Service.
- 24" wide panels can accept only one duplex outlet per side, two total back to back. All other panels can accept two per side, four total.
- Lateral jumpers connect electrical from one powerway assembly in a frame to another powerway assembly in a different frame at the same height.
- Vertical jumpers connect electrical from one powerway assembly to another powerway assembly in the same frame at different heights.
- All electrical access tiles have access holes for duplex outlets or data devices. Access holes have a standard single gang mounting pattern which will accommodate any manufacturers single gang data device plates and bezels.
- Electrical tiles are available in painted steel or with fabric covering.

Matrix Product Details

Tiles

- Tiles are available in many styles and options: fabric tackable acoustical, laminate, flat steel, perforated steel, embossed steel, white board, tool rail, glass, and open frame.
- Glass inserts are 1/4" tempered glass, available in many styles.
- Steel backers are available as a special for fabric tackable acoustical tiles for increased STC rating.
- Tiles are easily removable for field replacement.

Worksurfaces

- Worksurfaces are approximately 1 1/8" thick and are available with a 2 millimeter edge.
- Available in a multitude of shapes and sizes. Special sizes and dimensions are also available and easy to request.
- Different grommet locations are available for most worksurfaces and special grommet locations may be requested.

Support

- Available panel hung support includes standard and shared cantilever supports (24" and 30" deep surfaces), side support/rear brackets, panel top worksurface kits, and open frame worksurface kits.
- Available floor support includes: standard end panels and clear access end panels (12", 18", 24", 30" and 36" deep), universal combination legs, cross table bases, bi-point table bases, and full laminate support panels.
- Full laminate support panels are ideal for creating freestanding worksurface applications such as desk shells, returns, corner bases, carrels, and private office support.
- Painted Metal "A" Legs may be specified both as worksurface supports, as well as to add stability to panels.
- Other support items include flat plates, which are specified to help splice worksurfaces together at the front edge, and "V" channels, which mount to the underside of longer worksurfaces to provide bracing where a center support cantilever is not possible. "V" channels are highly recommended for surfaces longer than 48" without cantilever support.

Storage

- Structural pedestals are available 24" or 30" deep. Freestanding conversion kits are available for structural pedestals.
- Mobile pedestals are available 24" deep only.
- Lateral files are available in 2, 3, 4, and 5 drawer (30", 36", or 42" wide). The 2-drawer lateral file is structural with an open top. Freestanding conversion kits are available for converting structural lateral files to freestanding lateral files.
- Wardrobe towers are 48" and 64" high, are available left or right handed and with multiple options above the pedestal unit. Close cupboards and side panel bookshelves are available.
- A 2-Door cabinet and bookcase are also available.
- Panel hung storage includes mid-height shelves, corner mid-height shelves, Type C flipper door units (standard or raised), and Type D flipper door units (standard or raised).

Accessories

- Power/data pole shells mount to any Matrix frame or stack-on frame. Power/data pole shells can be divided into one, two, or three vertical channels with metal septums for separation of low voltage and high voltage.
- Other miscellaneous accessories include pelican drawers, wall track, tackboards, tasklighting, plastic pencil drawers, keyboard arms and trays, shelf dividers, desktop power/data modules, coat hooks, wall tile rails, paper flow elements, and FIT (ceiling tie-in application).

Component Detail 3

Matrix Frames Product Details

Product Detail 1
Panel Frame Availability

Matrix panel frames include (1) topcap (field mounted), (2) top tile retainers (field mounted), (2) bottom tile retainers (field mounted), and (2) 1 1/2" leveling glides. Each frame is shipped with the needed amount of 1/4-20 x 4" hex head bolts which are required for connecting frames in a straight line.

Matrix panel frames can connect at 90°, 120°, or 135° at a 2-way connection, 90° or 120° at a 3-way connection, and 90° at a 4-way connection.

Note: Door frames may also be connected at these angles, but the proper swing must be specified in order to avoid door swing interference. End of runs require a panel end cap. Change of heights in a straight line require a straight line HiLo trim. Change of heights at 90°, 120°, or 135° require connector HiLo trim.

Panel Frame Dimensions (Nominal):

Height: 34", 42", 50", 58", 66", 82"

Width: 24", 30", 36", 42", 48"

Product Detail 2
Stack-On Frame Availability

All Matrix panel frames, including door frames, can accommodate stack-on frames. Double stacking on door frames is allowed up to 48". Stack-on frames connect to each other in a straight line with 1/4-20 x 4" hex head bolts. When stack-on connectors are to be used in a 2-way, 3-way, or 4-way connection, stack-on connectors need to be specified separately.

Maximum stackability is 130". 82" Frame + (2 x 24" Stack-On) = 130"

Stack-On Frame Dimensions (Nominal)

Height: 8", 16", 24"

Width: 24", 30", 36", 42", 48"

Matrix Frames Product Details

Product Detail 3
Panel Frame Profile

Matrix panel frames have a topcap lay-in channel which is laterally continuous and unobstructed. Lay-in channel can accommodate up to 16 Cat 6 cables.

Electrical chase holes are located every 8" on the frame to accommodate data and electrical cables. Electrical can be mounted at any height in a frame. Every 8" of height can accommodate up to two powerway assemblies. Chase holes can accommodate up to 40 Cat 6 cables.

Topcap Lay-In Channel

Topcap lay-in channel can accommodate up to 16 Cat 6 cables.

Electrical Chase Hole

Electrical chase hole can accommodate up to 40 Cat 6 cables.

Product Detail 5
Panel Frame Creep Dimensions (Radius and Linear Profile)

Small increments are added to or taken away from the length of a run of panels as a result of the many ways panels are connected to each other. The accumulation of these increments is called panel creep. The connection scenarios below outline panel creep dimensions.

Straight Connections

Add 0" to panel run for each straight connection. 24" W (nominal) panels are shown.

2-Way Connections

Add 3 5/16" each time a perpendicular panel is added to the end of a panel run.

Note: 2-way connections add 3 5/16" in both directions.

3-Way Connections

Add 3 5/16" each time a perpendicular panel is added to the end of a panel run.

Note: 3-way connections add 3 5/16" in both directions.

4-Way Connections

Add 3 5/16" each time a perpendicular panel is added to the end of a panel run.

Note: 4-way connections add 3 5/16" in both directions.

Finished End Connections

Add 3/4" to the end of the panel run for each finished end cap.

Wall Mount Connections

Add 1" to the end of panel run for Wall Mount connection.

Matrix Frames Product Details

Product Detail 6 Rules for Panel Stability without Components

The guidelines below should be followed when designing AIS Matrix panel frames without components to ensure panel stability and safety. Change in height will not affect panel frame stability. Any panel not directly attached to a perpendicular panel frame or fixed wall will yield when pressure is applied.

Product Detail 7 Rules for Panel Stability with Components

The guidelines below should be followed when designing AIS Matrix panel frames with components to ensure panel stability and safety. Change of heights do not effect panel frame stability. Any panel not directly attached to a perpendicular panel frame or fixed wall will yield when pressure is applied.

* 30" worksurfaces must be supported at the front with side support brackets or floor support elements/pedestals.

Corner Application Sliding Door

When specifying sliding doors at a corner application, a 2-way connector and corner connector HiLo trim piece needs to be ordered in addition to the sliding door. This fills the 3 1/2" gap created by this scenario.

Radius Profile

Specify

- Finish Style for Topcap - Painted Metal
- Paint Selection for Tile Retainer
- Paint Selection for Topcap

Notes

Panel Frame is made of steel tube, welded frame construction. Includes one topcap (field mounted), two top tile retainers (field mounted), two bottom tile retainers (field mounted), and two 1 1/2" leveling glides. Frame can accommodate up to two stack-on frames. 1/4 - 20 x 4" long hex head bolts are supplied for connecting to adjacent frames in a straight line.

Every frame subtracts two mid-tile retainers from the combined total of mid-tile retainers on each order that includes both frames and tiles. For example, an order with one frame and eight tiles will receive six mid-tile retainers, which is the appropriate amount required to "completely dress" both sides of a frame. However, if both sides of a frame are not being dressed, or if the frames and tiles are specified for supplemental add-on orders where each tile is required to have a mid-tile retainer, such retainers must be ordered separately.

When ordering frames without tiles, please contact AIS Customer Service. If frames are going to be used with FIT product, specify frame with no topcap option. If extended topcaps are to be used, specify frame with no topcap option to eliminate redundant topcaps. One carpet gripper glide is shipped for every four panels.

Right Hand with Lock and Handle Shown

Specify

- Paint Selection for Sliding Door Frame

Notes

The Linear Sliding Privacy Screen attaches to frame face at either left or right, outside or inside of an opening. Select a Sliding Privacy Screen based upon the dimensions of the opening it will cover and the adjacent panel that it will be installed to. Linear Sliding Privacy Screens are available to accommodate 36", 42" or 48" wide by 66" or 82" high openings and adjacent panels. All doors come with a top track bar kit for added stability; only 82" high units extend over the doorway. Lightweight, aluminum frame, painted as specified, with a ribbed Lexan insert. The sliding door extends 6" into opening when fully open, and stands a total of 2-1/2" off panel face. These dimensions should be taken into consideration when planning for ADA door openings and aisle dimensional requirements if door is mounted on outside of office. Actual door thickness is 5/8". Actual door width is opening size +6". Only mount externally. Doors can only be locked from the outside, when user is out of office. Optional handles and wall termination brackets are available separately.

Notes

Stack-On Frame is made of steel tube, welded frame construction. Frame color is black and includes 1/4 - 20 x 4" long bolts for connecting to adjacent frames in straight line. Supports overhead storage. Note: Stack-on frame may be retrofitted over data cables run in topcap channel. Existing topcap from lower panel frame is re-used on the stack-on frame. Stack-on connectors and vertical trim ordered separately. Maximum stackability on any frame is 48". When stacking on an 82" frame, 130" would be the maximum stacking height.

Matrix Connector Product Details

Product Detail 1 Connector and Profile Options

2-Way Connectors:

Available in either 90°, 120°, or 135°. When specifying Matrix 2-Way connectors, you have the option of selecting radius profile trim or linear profile trim. This affects the style of the vertical connector trim cover and the connector topcap. 2-way connectors with Radius Profile are only available in painted metal finish.

Radius Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82"

Linear Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82"

3-Way Connectors:

Available in either 90° or 120°. When specifying Matrix 3-Way connectors, you have the option of selecting radius profile trim or linear profile trim. This affects the style of the connector topcap. 3-way connectors with Radius Profile are only available in painted metal finish.

Radius Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82"

Linear Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82"

4-Way Connectors:

Available in 90°. When specifying Matrix 4-Way connectors, you have the option of selecting radius profile trim or linear profile trim. This affects the style of the connector topcap. 4-way connectors with Radius Profile are only available in painted metal finish.

Radius Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82"

Linear Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82"

Matrix Connector Product Details

Product Detail 2

Connector and Profile Options (Cont.)

Panel End Caps:

Finish the end of a panel frame run where no other panel frames are to be connected. When specifying Matrix panel end caps, you have the option of selecting radius profile trim or linear profile trim. This affects the style of the vertical connector trim cover and the panel end cap topcap.

Radius Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82", 90", 98", 106"

Linear Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82", 90", 98", 106"

Note: 90", 98" and 106" high panel end caps are specified when stack-on panel frames are being utilized, drive the overall height of the panel frames over 82".

HiLo Trim Covers (Corner Application):

For 2-way, 3-way and 4-way applications finish the side of a 90° connector above the low panel. Specify size which corresponds to the difference between the height of the connector and the height of the low panel frame (ie: 66" high connector with a 42" high panel frame attached receives a 24" trim cover above the 42" panel frame).

Radius Profile - Painted Metal

Available Heights: 8", 16", 24", 32", 40", 48", 56", 64", 72", 80"

Linear Profile - Painted Metal

Available Heights: 8", 16", 24", 32", 40", 48", 56", 64", 72", 80"

HiLo Trim Covers (Straight Line Application):

For 180° applications finishes the side of the panel frame above the low panel. Specify size that corresponds to the difference between the height of the high panel frame and the height of the low panel frame (ie: 66" high panel frame with a 42" high panel frame attached receives a 24" trim cover above the 42" panel frame).

Radius Profile - Painted Metal

Available Heights: 8", 16", 24", 32", 40", 48", 56", 64", 72", 80"

Linear Profile - Painted Metal

Available Heights: 8", 16", 24", 32", 40", 48", 56", 64", 72", 80"

Matrix Connector Product Details

Product Detail 3 Connector and Profile Options (Cont.)

Radius Straight Line Topcap 180°:

Connects two topcaps in a 180° straight line at equal heights. Must be specified separately for each straight line condition. Straight Line Topcap 180° connectors are only required for the connection of radius profile panel frames. Linear profile panel frames do not require this topcap connector.

Radius Profile - Painted Metal

Note: Straight Line Topcap 180° Connectors are only required for the connection of Radius Profile Panel Frames. Linear Profile Panel Frames do not require this Topcap Connector.

Wall Mounts:

Mounts panel frames and door frames perpendicular to a fixed wall. When specifying Matrix wall mount connectors, you have the option of selecting radius profile trim or linear profile trim. When the linear profile is selected, you need to also be aware of the width of the panel frame being mounted at the wall mount location. Because the wall mount adds 1" of creep to the panel run, the extended topcap sent with this kit replaces the panel frame topcap which would otherwise be used on the panel frame at the connection. Be sure to specify this particular panel frame with the "no topcap option" in order to avoid receiving an unusable panel frame topcap.

Radius Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82", 90", 98", 108"

Linear Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82", 90", 98", 108"
Available Widths: 24", 30", 36", 42", 48"

Stack-On Connectors:

For 2-way, 3-way, or 4-way scenarios are designed to add height to a base connector where stack-on frames are used. For instance, two 66" high panel frames connected at 90° with a 66" high 2-way connector could be expanded 24" with two 24" stack-on frames inserted into the tops of the two 66" panel frames. A 24" 2-way stack-on connector is required to connect the two stack-on frames above the base connector. A separate connector vertical cover must be specified separately to accommodate the added height. The connector topcap from the base connector is used at the top of the stack-on connector. Includes 1/4" - 20 x 2 1/4" long bolts for connecting to adjacent frames.

Matrix Connector Product Details

Product Detail 4
Connector Vertical Covers and Profile Options

2-Way Connector Vertical Covers:

In 90°, 120°, or 135° are specified separately only when stack-on connectors increase the height of a base connector. Specify the connector which corresponds to the overall height of a base connector plus the height of the stack-on connector. When specifying Matrix 2-way connector vertical covers, you have the option of selecting radius profile trim or linear profile trim. Connector vertical cover stack-on covers are specified when stack-on connectors extend beyond the height of 108".

Radius Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82", 90", 98", 106"

Stack-On Cover

Available Heights: 8", 16", 24", 32", 40", 48"

Linear Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82", 90", 98", 106"

Stack-On Cover

Available Heights: 8", 16", 24", 32", 40", 48"

3-Way Connector Vertical Covers:

In 90° are specified separately only when stack-on connectors increase the height of a base connector. Specify the connector which corresponds to the overall height of a base connector plus the height of the stack-on connector. Note: 3-way connector vertical covers have the same linear profile whether radius or linear connectors are selected. Note: Connector vertical cover stack-on covers are specified when stack-on connectors extend beyond the height of 108". 3-way Connector Vertical Covers have the same Linear Profile for both Radius or Linear connectors.

Radius Profile - Painted Metal

Available Heights: 34", 42", 50", 58", 66", 82", 90", 98", 106"

Stack-On Cover

Available Heights: 8", 16", 24", 32", 40", 48"

Notes

Connects two frames of equal height at 90°, 120°, or 135°. Order connector for specific connection angle. For frames of unequal height, specify the connector that corresponds to the highest panel in the configuration. Includes connector topcap and vertical cover. Vertical cover is shipped installed on connector, but may be removed on-site for installation of electrical cables. See installation instructions. Includes 1/4 - 20 x 2 1/4" long bolts for connecting to adjacent frames.

Specify

Notes

- Paint Selection for Topcap/Vertical Cover

Connects three frames of equal height at 90° or 120°. Order connector for specific connection angle. For frames of unequal height, specify the connector that corresponds to the highest panel in the configuration. Includes connector topcap and vertical cover. Vertical cover is shipped installed on connector, but may be removed on-site for installation of electrical cables. See installation instructions. Includes 1/4 - 20 x 2 1/4" long bolts for connecting to adjacent frames. 3-Way 120° connectors do not require a vertical cover.

H	Model Number	List
8	P-M2BXC08	124
16	P-M2BXC16	139
24	P-M2BXC24	146

Notes

Stack-On Connectors for a 2-way, 3-way or 4-way scenario are designed to add height to a base connector where stack-on frames are used. For instance, two 66" high panels connected at 90° with a 66" high 2-way connector could be expanded 24" with two 24" stack-on frames inserted into the tops of the two 66" panels. A 24" 2-way stack-on connector is required to connect the two stack-on frames above the base connector. Note: A separate connector vertical cover must be specified separately to accommodate the added height. See following pages. The connector topcap from the base connector is used at the top of the stack on connector. Includes 1/4 - 20 x 2 1/4" long bolts for connecting to adjacent frames.

- Paint Selection for Vertical Cover (if applicable)

HiLo Trim Cover for 2-way, 3-way and 4-way applications finishes the side of a 90° connector above the low panel. Order one for each unfinished side. Specify size which corresponds to difference between the height of the connector and the height of the low panel (ie: 66" high connector with a 42" high panel attached gets a 24" trim cover above the 42" panel). HiLo trim covers for 90° connectors are different from those used in a straight line 180° HiLo condition. See straight line HiLo's.

- Paint Selection for Topcap/Vertical Cover (if applicable)

Linear Connector Trim Conversion Kits - 3-Way 90°, 120°- are specified when converting existing radius profile connectors to linear profile connectors. Includes linear profile connector topcap and vertical cover (painted metal).

3-way 120° kits include only the connector topcap since there are no vertical covers on 3-way 120° connectors.

4-WAY 90° LINEAR CONNECTOR TRIM CONVERSION KIT

Model Number	List
P-MLK4	59

Specify

Notes

- Paint Selection for Vertical Cover (if applicable)
- Finish Style for Painted Metal

Linear Connector Trim Conversion Kits - 4-Way 90°- are specified when converting existing radius profile connectors to linear profile connectors. Includes only the connector topcap (painted metal) since there are no vertical covers on 4-way 90° connectors.

Linear Wall Mount Trim Conversion Kits, Wall Tracks and Off-Modular Frame Connection Kits

LINEAR WALL MOUNT TRIM CONVERSION KITS

H	Model Number	List	Grade C Paint
24	P-MLKWM24	108	+10
30	P-MLKWM30	113	+10
36	P-MLKWM36	116	+10
42	P-MLKWM42	119	+10
48	P-MLKWM48	124	+10

Specify Notes

- Finish Style for Painted Metal
 - Paint Selection for Top-cap(if applicable)
- Linear Wall Mount Trim Conversion Kits - specify top-cap width to correspond to the width of the panel attached to the wall mount.

WALL TRACKS

H	Model Number	List	Grade C Paint
60	A-WTRK60	136	+5
80	A-WTRK80	166	+5

Specify Notes

- Paint Selection
- Wall Track mounts to fixed walls to provide slotted channel for worksurface support brackets, tack-boards or shelves. Slots are on 1" vertical repeat pattern. Wall track mounting holes are 1/4" diameter, repeat 6" on center starting 1/2" from top of track. Track sits approx. 5" off floor when leveled with top of panels to accommodate wall cover base. *Hardware for mounting wall track to walls is not included.* Use hardware appropriate to wall type.

Important: Wall track may be shared with Matrix and AO2 storage. Wall track may not be shared with Divi and MWall storage.

OFF-MODULAR FRAME CONNECTION KITS

Model Number	List
P-M2OMFC	138

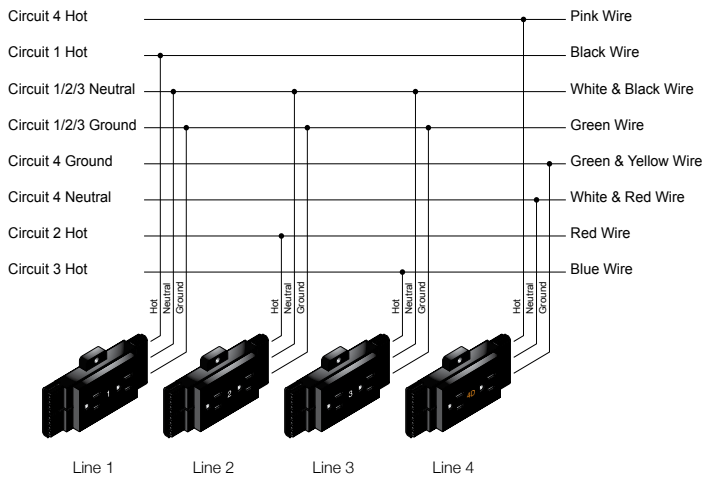

Specify Notes

- Paint Selection
- Off-Modular Frame Connection Kit mounts over top of panel and is available in all standard paint colors. Used in conjunction with off-modular rails (included with off-modular tiles) to mount a Matrix frame to the face of another Matrix frame. Frame may be mounted anywhere along off-modular rail and may be moved easily in the future. Connection is fully load bearing. Specify an off-modular top-tile and off-modular mid-tile at the bottom of the frame to accommodate an off-modular frame connection. If off-modular panel is lower than spine panel, specify an off-modular mid-tile at location such that the top of the mid-tile matches the top of the low off-modular frame.

Matrix Electrical Product Details

Product Detail 1 Electrical Components (8 Wire, 4 Circuit)

AIS Matrix 8 Wire 4 Circuit electrical system contains four circuits. Each circuit is rated at 20 amps/120 volts maximum. Circuit 1, Circuit 2 and Circuit 3 are served by a system neutral and an equipment ground. Circuit 4 is dedicated and is served by its own neutral and ground. Circuit and ground conductors are #12 A.G.W. (gauge). All neutrals are #10 A.G.W. (gauge).

Shown below is a cross section of metal cable used for 8 Wire 4 Circuit jumpers and infeeds. Circuit and ground conductors are #12 A.G.W. (gauge). All neutrals are #10 A.G.W. (gauge).

Powerways provide electrical distribution and access for duplex outlets back to back. 24" wide panels can accept only one duplex outlet per side, two total back to back. All other powerways can accept two per side, four total back to back. Powerways "grow" in length with frames of greater width, making panel to panel connections a "standard" configuration and allowing for "pass through" connections. Each powerway has locations for up to four jumpers, two at each end.

Duplex Outlets are designated as circuits 1 through 4. Each duplex outlet contains two single receptacles (places to plug into) of the same circuit and are specified separately from powerways. All duplex outlets have black faces. The lettering on outlets for Circuit 1, 2 and 3 is white. The lettering on outlets for Circuit 4 is orange. Outlets are screw mounted to powerway and include a plastic or metal outlet trim bezel which can be ordered black to match outlets or the color of the painted tile. Duplex outlets are standard 15 amp outlets. For 20 amp outlets, call AIS Customer Service.

Common Equipment Amperages:

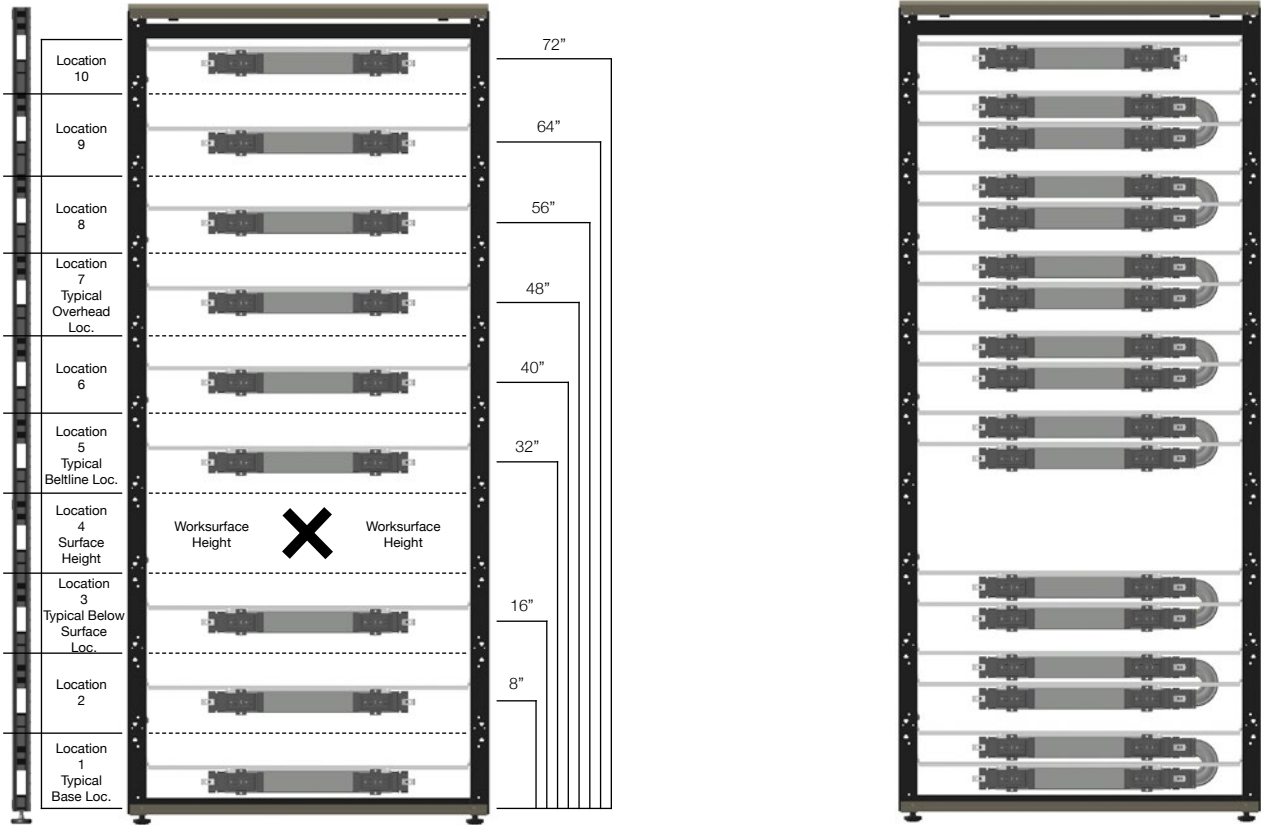

Personal Computer 2.00 - 4.00
Laser Printer 5.00 - 8.00
Desktop Plotter 1.50
Fan 1.00
Heater 8.50 - 12.50
Tasklight 1.00
Slide Projector 2.00 - 6.00
Coffee Pot 15.00
Paper Shredder 4.40 - 13.00
Radio 0.05
Pencil Sharpener 1.00
Calculator 0.25
Answering Machine 0.08

Matrix Electrical Product Details

Product Detail 2
Electrical Location and Vertical Jumpers

An AIS Matrix panel frame contains an electrical “chase” hole for electrical and data cables at every 8” of height. These chase holes are divided into “locations”. Each location has an upper and lower “position”. A 34” high panel has four electrical locations while an 82” high panel has 10 locations. Powerway assemblies can be mounted in any location and position except the four upper and the last upper position of the highest location, which in the illustration below, is 10 upper. Each location has one electrical chase hole aligned with the lower position of every location. Therefore, electrical cables can only be chased from the lower positions to lower positions. Use the upper positions for additional powerway assemblies to provide access for more duplex outlets or jump points for vertical jumpers. Horizontal crossbar of frames inhibit the use of power and data in the top upper position.

Location 4 is not recommended for use, as an electrical tile located at this location would most likely be blocked by a worksurface. Powerway assemblies can be mounted at any position; however, jumping to adjacent panels can only be done at the lower positions. To access the upper positions, use vertical jumpers or double powerway jumpers inside a frame or use a lower position from a location above the assembly. The formula for figuring out a vertical jumper length inside the same frame is: Higher Location - Lower Location x 8” = Delta. Location 7 lower to location 5 lower = 7 - 5 = 2 x 8 = 16” delta. Note: Vertical jumpers are designed to span from lower to lower or upper to upper. For example, jumping from 5 lower to 9 upper is not correct. Note: Horizontal crossbar of frames inhibit the use of power and data in the top upper position.

Note: Certain areas of Chicago prohibit the use of modular electrical systems and require all electrical components to be hardwired. All electrical components need to be supplied by the electrician.

Electrical Jumpers

PANEL-TO-PANEL JUMPERS

L	Type	Model Number	List
18	Standard	E-MX8W4PTPC18	162
21	Extended	E-MX8W4PTPC21	170

Notes

Panel-to-Panel Jumpers connect two powerway assemblies across a straight panel connection at the same elevation location. Order an Extended Panel-to-Panel Jumper when connecting two powerway assemblies at 90° at the same elevation location or straight across the gap created by a 3-way or 4-way at the same elevation location.

LATERAL PASS THROUGH JUMPERS

Panel W	Actual L	Model Number	List
24	45	E-MW8W4PJ24E	241
30	51	E-MW8W4PJ30E	253
36	57	E-MW8W4PJ36E	261
42	63	E-MW8W4PJ42E	269
48	69	E-MW8W4PJ48E	292

Notes

Lateral Pass Through Jumpers pass laterally through a non-powered frame to connect two powerway assemblies at the same elevation location. Specify the jumper that corresponds to the width of the panel to be passed through. Lateral pass through jumpers are used for both straight, standard pass throughs, and extended situations.

VERTICAL TRANSITION JUMPERS

Panel W	Actual L	Model Number	List
8	18	E-MX8W4PTPC18	162
16	24	E-UN8W4VT16	210
24	37	E-MW8W4PJ18	216
32	43	E-MW8W4PJ24	231
40	48	E-MW8W4PJ30	249
48	57	E-MW8W4PJ36E	261
56	67	E-MW8W4PJ48	285
64	79	E-MW8W4PJ60	306
72	81	E-MW8W4PJ60E	322

Notes

Vertical Transition Jumpers connect two powerway assemblies at different elevation locations inside the same frame. Specify length by delta elevation. [ie: location 7 lower to location 3 lower = $(7-3 = 4) \times 8" = 32" = \text{VT jumper for a } 32" \text{ delta.}$]

DOUBLE POWERWAY VERTICAL JUMPER

L	Model Number	List
12	E-MXDPWJV	206

Notes

Double Powerway Vertical Jumper connects two powerway assemblies inside the same elevation location.

Note: Certain areas of Chicago prohibit the use of modular electrical systems and require all electrical components to be hardwired. All electrical components need to be supplied by the electrician.

Access Hole Covers, Outlet Trim Bezels and I-Connectors

ACCESS HOLE COVERS

Model Number	List
E-MXWCPB	24

Specify	Notes
• Paint Selection for Access Hole Covers	Access Hole Covers are included with every electrical tile. Order separately only if using less than the indicated number of holes (one per dual tile or two per quad tile).

OUTLET TRIM BEZELS

Model Number	List
E-MXWCPB	21

Specify	Notes
• Paint Selection for Outlet Trim Bezels	Outlet trim bezels are included with every duplex outlet. Order separately only if bezels are lost or for punch lists.

I-CONNECTOR

Model Number	List
E-UN8W4ICON	118

Notes
I-Connector is only required when it is necessary to connect two male end jumpers.

Electrical Outlets

DUPLEX OUTLETS

Line	Model Number	List
1	E-MX8W4FDO1	54
2	E-MX8W4FDO2	54
3	E-MX8W4FDO3	54
4	E-MX8W4FDO4	54

Notes

Duplex Outlets are available in designated circuits 1 through 4. Each duplex outlet contains two single receptacles (places to plug into) of the same circuit and are specified separately from powerways. All duplex outlets have black faces. The lettering on outlets for circuit 1, 2 and 3 is white. The lettering on outlets for circuit 4 is orange. Outlets are screw mounted to the powerway and include a plastic or metal outlet trim bezel which can be ordered in black to match outlets or the color of the painted tile. Duplex outlets are standard 15 amp outlets.

CALIFORNIA TITLE 24 CONTROLLED DUPLEX OUTLETS

Line	Model Number	List
1	E-MX8W4T24DO1	65
2	E-MX8W4T24DO2	65
3	E-MX8W4T24DO3	65
4	E-MX8W4T24DO4	65

Notes

Duplex Outlets - California Title Controlled - In California, 50% of all outlets in a system panel cluster or benching cluster, for new construction, MUST be controlled outlets, even if there is no task lighting. Customers should plan on using 2 and 3 controlled circuits, and plan general load for all items on circuits 1 and 4. If using 2+2 configuration, controlled circuits should be 1 and 2, and general load circuits on 4 and 5. Outlets must have the "controlled" symbol for identification purposes.

USB OUTLETS

Line	Model Number	List
1	E-MX8W4USB01	327
2	E-MX8W4USB02	327
3	E-MX8W4USB03	327
4	E-MX8W4USB04	327

Notes

USB Outlets bring charging options to panel power distribution systems. The USB Outlets provide convenient charging power access through dual ports on the face of the receptacle. Include a plastic or metal outlet trim bezel which can be ordered in black to match outlets or the color of the painted tile. The USB Outlets offer a total of 2 Amps between two USB charging ports. The USB Outlets are UL and FCC Part 15A approved.

Note: Certain areas of Chicago prohibit the use of modular electrical systems and require all electrical components to be hardwired. All electrical components need to be supplied by the electrician.

In-Feeds and Hardwire Junction Boxes

RECEPTACLE MOUNTED BASE IN-FEEDS

L	Hand	Model Number	List
72	Left	E-UN8W4BIFL	392
72	Right	E-UN8W4BIFR	392

Notes

Receptacle Mounted Base In-Feeds provide interface with building power and mounts to powerway at duplex outlet location. Each base feed is 6' in length, encased in "liquid tight". New York City code requires the use of a special base feed with an in-line junction box, see New York City Base In-Feeds for more details.

NEW YORK CITY BASE IN-FEEDS

L	Hand	Model Number	List
72	Left	E-HM8W4BIFLNY	762
72	Right	E-HM8W4BIFRNY	762

Notes

New York City Receptacle Mounted Base In-Feeds provide interface with building power and mount to powerway at duplex outlet location. Each base feed is 6' in length, encased in "liquid tight". New York City code requires the use of a special base feed with an in-line junction box.

CEILING IN-FEED KIT

Model Number	List
E-M28W4CIF	504

Notes

Ceiling In-Feed Kit provides interface with building power from a suspended ceiling through a power pole shell. Power pole shells are ordered separately. Includes one ceiling in-feed 144", one panel-to-panel jumper 18", and two I-Connectors. Power/Data Pole Kits are sold and specified separately.

Important: Vertical transition jumper is required and specified separately in order to reach power input destination. The ceiling in-feed is restricted at the horizontal steel tube at the top of the panel frame. The panel-to-panel jumper (via an I-Connector) brings the power 18" down into the panel frame. From this point, an additional vertical transition jumper (via an I-Connector) needs to be specified in order to bring power source to the power assembly mounted at any of the locations within the panel frame.

DOUBLE SIDED JUNCTION BOX

Model Number	List
E-M2JBCH	310

Notes

Hardwire Junction Box allows standard, hardwired, single gang duplex outlets to be used in Matrix panels at each standard, modular duplex outlet location. Each outlet will require one junction box; however, outlets can be placed back to back on a spine, with a total of two outlets total per box. Junction boxes mount to inside wall of Matrix frame and occupy one vertical electrical position in any numbered location. Thus boxes can be stacked in location 1 (base) or location 5 (beltline) in both the upper and lower positions. **Junction boxes do not include electrical connectors.** Boxes are UL listed. Decora faced outlets cannot be used. Kit includes all hardware required to attach box to Matrix frame at duplex outlet location. Designed for use with Chicago power or wherever junction boxes are required by code.

Standard Matrix electrical tiles are required on both front and back sides of frame, regardless of if 2 outlets are needed. If only using 1 outlet on one side, use standard duplex outlet cover on non-outlet side. Boxes have standard 0.875" knock-outs for electrical connectors. Kit includes two low profile metal face plates painted per specification. Box is 2.448"H x 2.059"W x 12"L. Junction boxes can be used with either 15 amp or 20 amp single gang outlets.

- Paint Selection for Topcap (if applicable)

Power/Data Pole Kits provide sealed vertical channel for running ceiling feeds and/or data cables from suspended ceiling. Poles mount to any Matrix frame or stack-on frame and are designed to finish at a height of 136". Each frame can accommodate two poles mounted approximately 4" from panel end. Order ceiling in-feeds separately. Pole can be divided into one, two or three sections for separation of low voltage and high voltage. Specify pole that corresponds to panel height and panel width.

Powerway Assemblies and Data Plate Kits

SINGLE POWERWAY ASSEMBLIES

W	Model Number	List
24	E-MXEK24	238
30	E-MXEK30	251
36	E-MXEK36	266
42	E-MXEK42	277
48	E-MXEK48	291

Notes

Single Powerway Assemblies occupy one position of one electrical location in a Matrix frame. Assembly mounts to inside of frame with screws. Assembly can accommodate four duplex outlets total.

DOUBLE POWERWAY ASSEMBLIES

W	Model Number	List
24	E-MXEL24	597
30	E-MXEL30	625
36	E-MXEL36	652
42	E-MXEL42	678
48	E-MXEL48	705

Notes

Double Powerway Assemblies occupy two positions of one electrical location in a Matrix frame. Assembly mounts to inside of frame with screws. Assembly can accommodate eight duplex outlets total. Assembly includes a double powerway vertical jumper.

DATA PLATE KITS

Item	Model Number	List
6 Port Data Gang Plate	E-HDP6B-SM	26
CAT 5e Jack	E-HRJ45-SM	93
CAT 6 Data Jack	E-HXJ6BK-SM	102
Hole Blank (Pk 10)	E-SFBB10-SM	62

Notes

Data Plate Kits has six ports for modular jacks. Bezel screws directly to Matrix electrical access tiles in pre-drilled and tapped hole pattern. RJ-45 jack can be used in place of RJ-11 jacks.

Note: Certain areas of Chicago prohibit the use of modular electrical systems and require all electrical components to be hardwired. All electrical components need to be supplied by the electrician.

Electrical Tiles and Data Cable Support Troughs

Specify

Notes

- Tile Retainer Style - Linear or Radius Profile
- Paint Selection for Tile Retainer, Access Hole Cover and Tile (if applicable)
- Fabric Selection for Tile (if applicable)

Dual Electrical Tiles contain two access holes at the lower position for duplex outlets or data devices. Available in painted steel or fabric covered steel. Access holes are standard electrical single gang interface which will accommodate any manufacturer's single gang data device plates or bezels screwed directly to the tile. Includes: one mid-tile retainer, two tile retainer clips, and one access hole cover. If only one access hole is used, order an additional access hole cover separately. Tile is "front" removable/replaceable. Use when specifying electrical powerway assemblies separately. Specify jumpers and outlets separately. 24" wide tile has only one access hole. Access Hole has dimensions of 2"H x 2.875"W.

8	48	P-M2TEQ0848	124	+20	+20	+31	+44	+5	+5

Specify

Notes

- Tile Retainer Style - Linear or Radius Profile
- Paint Selection for Tile Retainer, Access Hole Cover and Tile (if applicable)
- Fabric Selection for Tile (if applicable)

Quad Electrical Tiles contain four access holes (two in the top location and two in the bottom location) for duplex outlets or data devices. Available in painted steel or fabric covered steel. Access holes are standard single gang interface which will accommodate any manufacturer's single gang data device plates or bezels screwed directly to the tile. Includes: one mid-tile retainer, two tile retainer clips, and two access hole covers. If less than two access holes are used, order additional access hole covers separately. Tile is "front" removable/replaceable. Use when specifying electrical powerway assemblies separately. Specify jumpers and outlets separately. 24" wide tile has only two access holes. Access Hole has dimensions of 2"H x 2.875"W.

DATA CABLE SUPPORT TROUGHS

With Hole

Without Hole

Specify

- Paint Selection

Notes

Open Frame In-Feed Tiles allow for the use of a side-mounted in-feed with Matrix product, when using an open frame tile at the bottom of the frame. Open frame tiles should be used back to back in a Matrix frame, with one tile containing a knockout hole and the other without. Must use side mounted in-feed with open frame in-feed tiles.

UTILITY TILES

Mid-Grip Bracket

Off-Modular Mid-Rail
Radius Profile Only (works with Linear)

Specify

- Paint Selection for Tile Rail (Radius Profile only)
- Fabric Selection for Tile

Notes

Off-Modular Mid-Tiles - Tackable Acoustical include one off-modular mid-tile rail and mounting hardware. Off-modular mid-tiles are made smaller in height to accommodate off-modular rails. Use rails in conjunction with off-modular frame connectors and off-modular overhead elements. Tile sizes 16"H - 32"H include two mid-grip brackets. Tile sizes 40"H - 64"H include four mid-grip brackets. Tile is front removable for easy replacement and access to frame interior.

Notes

Single Wall Tile Rails are used at the edge of tiles where there are no adjacent tiles. Wall tile rails are structural and will support worksurfaces and overheads where appropriate wall hardware is used. Available in black only. Tiles and tile retainers ordered separately.

SHARED WALL TILE RAILS

H	Model Number	List
34	A-M2WTRSH34	113
42	A-M2WTRSH42	125
50	A-M2WTRSH50	139
58	A-M2WTRSH58	152
66	A-M2WTRSH66	166
74	A-M2WTRSH74	178
82	A-M2WTRSH82	196

Notes

Shared Wall Tile Rails are used for sharing tiles between tiles. Wall tile rails are structural and will support worksurfaces and overheads where appropriate wall hardware is used. Available in black only. Tiles and tile retainers ordered separately.

SINGLE STACK WALL TILE RAILS

H	Model Number	List
8	A-M2WTRS08	72
16	A-M2WTRS16	86
24	A-M2WTRS24	99

Notes

Single Stack Wall Tile Rails are used to stack above longer rails for taller walls. Wall tile rails are structural and will support worksurfaces and overheads where appropriate wall hardware is used. Available in black only. Tiles and tile retainers ordered separately.

SHARED STACK WALL TILE RAILS

H	Model Number	List
8	A-M2WTRSH08	71
16	A-M2WTRSH16	86
24	A-M2WTRSH24	99

Notes

Shared Stack Wall Tile Rails are used to stack above shared rails for taller walls. Wall tile rails are structural and will support worksurfaces and overheads where appropriate wall hardware is used. Available in black only. Tile and tile retainers ordered separately.

Wall Tile Corner Filler Strips

WALL TILE CORNER FILLER STRIPS

114	P-M2WTRCFS114	62
122	P-M2WTRCFS122	65
130	P-M2WTRCFS130	71

Notes

Wall Tile Corner Filler Strips are a 1" square foam which is used to fill the gap created in a corner when using wall tile rails. Available in black. Tiles and tile retainers ordered separately.

Cantilevers and Support Brackets

STANDARD CANTILEVERS

Surface Depth	Actual Depth	Hand	Model Number	List	Grade C Paint
24	18	Left	WPS-UNCT24L	72	+10
24	18	Right	WPS-UNCT24R	72	+10
24	18	Pair	WPS-UNCT24P	139	+20
30	25.5	Left	WPS-UNCT30L	139	+10
30	25.5	Right	WPS-UNCT30R	139	+10
30	25.5	Pair	WPS-UNCT30P	276	+20

Specify

Notes

- Paint Selection for Cantilevers

Standard Cantilevers provide cantilevered worksurface support from panel or wall track at either the left or right hand side of a worksurface. All worksurface support components fasten directly to worksurfaces with screws. Standard cantilevers may also be used as a center support. Specify cantilever that corresponds to worksurface depth. It is highly recommended that flat plates are specified in conjunction with support cantilevers to splice two worksurfaces together at the front edge. Painted black as standard, all other trim colors are Grade C upcharged.

SHARED CANTILEVERS

Surface Depth	Actual Depth	Hand	Model Number	List	Grade C Paint
24	18	Single	WPS-UNCT24S	103	+10
24	18	Pair	WPS-UNCT24SP	203	+20
30	25.5	Single	WPS-UNCT30S	203	+10
30	25.5	Pair	WPS-UNCT30SP	409	+20

Specify

Notes

- Paint Selection for Cantilevers

Shared Cantilevers provide cantilevered support from panel or wall track at seam between two worksurfaces. All worksurface support components fasten directly to worksurfaces with screws. Specify cantilever that corresponds to worksurface depth. It is highly recommended that flat plates are specified in conjunction with support cantilevers to splice two worksurfaces together at the front edge. Painted black as standard, all other trim colors are Grade C upcharged.

PANEL MOUNTED SHELF CANTILEVERS

Surface Depth	Actual Depth	Hand	Model Number	List	Grade C Paint
12	10	Left	WPS-CT10L	129	+10
12	10	Right	WPS-CT10R	129	+10
12	10	Pair	WPS-CT10P	248	+20

Specify

Notes

- Paint Selection

Panel Mounted Shelf Cantilevers are 10"d and designed to work in conjunction with 12"d worksurfaces to create additional desk top shelving. Available for all AIS panel systems (Matrix, Divi and MWall). For use with 12" to 16" worksurfaces only.

SIDE SUPPORT / REAR BRACKETS

Hand	Model Number	List	Grade C Paint
Left	WPS-SSSAL	51	+10
Right	WPS-SSSAR	51	+10
Pair	WPS-SSSA	100	+20

Specify

Notes

- Paint Selection for Side Support / Rear Bracket

Side Support/Rear Brackets provide direct support from panel or wall track along short side of rectangular worksurface or at rear of corner worksurface. All worksurface support components fasten directly to worksurfaces with screws. Painted black as a standard. All other trim colors are Grade C upcharged.

End Panels and Pedestal-to-Panel Attachment Brackets

STANDARD END PANELS

D	Model Number	List	Grade C Laminate
12	WFS-EPMX12	260	+20
18	WFS-EPMX18	305	+24
24	WFS-EPMX24	345	+27
30	WFS-EPMX30	383	+30
36	WFS-EPMX36	436	+34

Specify

Notes

- Laminate Selection for End Panel
- 2mm Edge Selection for End Panel

Standard End Panels have laminated vertical surfaces and a 2mm PVC vertical front edge. Standard end panels provide direct support from floor at left or right side of a worksurface, and engage and lock to panels with provided mounting brackets. All worksurface support components fasten directly to worksurfaces with screws. Specify end panel that corresponds to worksurface depth.

CLEAR ACCESS END PANELS

D	Model Number	List	Grade C Laminate
24	WFS-EPCAMX24	362	+29
30	WFS-EPCAMX30	404	+32

Specify

Notes

- Laminate Selection for End Panel
- 2mm Edge Selection for End Panel

Clear Access End Panels have laminated vertical surfaces and a 2mm vertical front edge. Clear access end panels provide direct support from floor at left or right side of a worksurface, and engage and lock to panels with provided mounting brackets. All worksurface support components fasten directly to worksurfaces with screws.

PEDESTAL-TO-PANEL ATTACHMENT BRACKET

Model Number	List	Grade C Laminate
S-MXPMPB	167	+25

Specify

Notes

- Paint Selection

Pedestal-to-Panel Attachment Brackets attach structural pedestals to panels. These brackets serve as a space filler and as a way to add stability to panels. Pedestal to panel attachment brackets may only be used when the nominal surface depth matches the nominal pedestal depth (24" Deep surface & 24" deep pedestal or 30" deep surface and 30" deep pedestal).

Panel Mounted Right Hand

Panel Mounted Right Hand Shared

Freestanding

Specify

Notes

• Paint Selection

A-Legs are constructed from 1" x 2" painted steel. Legs have 1 1/2" leveling glides. A-Leg welded construction allows for attachment to the work-surface. Panel attachment brackets are included and installed at the factory for panel mounted legs. Panel locking bracket for panel attachment situations ships separate. Freestanding A-Legs cannot be used as freestanding table support. One side must be anchored to a storage element or panel.

Worksurface Kits, Support Brackets and Attachment Brackets

LINEAR PROFILE TRANSACTION TOP WORKSURFACE KITS

D	Model Number	List	Grade C Laminate
24	P-MLCTT24	345	+5
30	P-MLCTT30	362	+5
36	P-MLCTT36	380	+5
42	P-MLCTT42	399	+5
48	P-MLCTT48	419	+5

Specify

- Paint Selection for Tiles Retainer and Topcap (if applicable)

Notes

Transaction Top Worksurface Kit supports a panel top worksurface. Panel top worksurface kits are specified by panel width. If spanning two panels, order a panel top worksurface kit for each panel. Kit includes one topcap, two panel top worksurface brackets, two countertop splice plates, and hardware. When specifying for wood veneer trim, a new topcap is not required as it is for a painted metal topcap. Order panel top worksurfaces separately.

RADIUS PROFILE TRANSACTION TOP WORKSURFACE KITS

D	Model Number	List	Grade C Laminate
24	P-M2CTT24	318	+5
30	P-M2CTT30	334	+5
36	P-M2CTT36	350	+5
42	P-M2CTT42	367	+5
48	P-M2CTT48	386	+5

Specify

- Paint Selection for Tiles Retainer and Topcap (if applicable)
- Finish Style for Painted Metal

Notes

Transaction Top Worksurface Kit supports a panel top worksurface. Panel top worksurface kits are specified by panel width. If spanning two panels, order a panel top worksurface kit for each panel. Kit includes one topcap, two panel top worksurface brackets, two top tile retainers, and hardware. Order panel top worksurfaces separately.

OPEN FRAME WORKSURFACE KITS

Model Number	List
P-MXCTP	447

Notes

Open Frame Worksurface Kit supports an open frame worksurface. Kit includes two open frame mounting brackets and mounting hardware. Specify open frame worksurface and open frame tiles separately.

WING PANEL SUPPORT BRACKET

Model Number	List
P-MXWPSK	77

Notes

Wing Panel Support Bracket acts as a wing panel stabilizer, connecting a work surface to a wing panel that matches the worksurface depth. Bracket can also be used on the back of a work surface behind a structural pedestal to keep a panel tight to a work surface back.

Mid-Height Shelf Units

MID-HEIGHT SHELF UNITS

H	W	D	Model Number	List	Grade C Paint
7.75	24	12	S-SHFMX24	233	+12

Type C Flipper Door Unit - Metal/Fabric Door Front provides binder height, lockable overhead storage. Door opens and stores above top cover pan. Flipper unit has an open back. Shelf ends have locking swing cams to prevent dislodgement. Shelf bottom will receive tasklights. Easy Down Mechanisms are optional for all sizes and recommended on 60" wide units. All flipper doors are lockable with two supplied keys. Lock cores are removable with removal keys and master keys are available. Extra lock cores are available for keying flipper doors alike, but flipper doors may not be ordered without locks. Keying flippers alike requires removal of pre-installed lock cores and installation of keyed alike cores in the field. Order flipper unit that corresponds to panel width. See "Accessories" for ordering replacement keys, master keys, core removal keys, additional keys cores for keying alike or replacement uses.

Notes

Type D Raised Flipper Door Unit - Solid Metal Door Front provides binder height, lockable overhead storage. When mounted on 50" high panels, unit rests level with a standard flipper door unit mounted at the top of a 66" high panel. Door opens and stores above top cover pan. Backside of unit is completely enclosed providing added security. Shelf ends have locking swing cams to prevent dislodgement. Shelf bottom will receive tasklights. Easy Down Mechanisms are optional for all sizes and recommended on 60" wide units. All flipper doors are lockable with two supplied keys. Lock cores are removable with removal keys and master keys are available. Extra lock cores are available for keying flipper doors alike, but flipper doors may not be ordered without locks. Keying flippers alike requires removal of pre-installed lock cores and installation of keyed alike cores in the field. Order flipper unit that corresponds to panel width. See "Accessories" for ordering replacement keys, master keys, core removal keys, additional key cores for keying alike or replacement uses.

Matrix FIT Product Details

Product Detail 1 FIT Channels

AIS FIT is an aluminum extruded ceiling mounted channel which will retain AIS Matrix panels flush to a suspended or fixed ceiling for the purposes of visual privacy and lateral structural support. The FIT ceiling track utilizes a standard twist clip with a threaded stud attached to the ceiling grid for a standard suspended ceiling with a 15/16" ceiling grid. (For a 9/16" or 1/4" ceiling grid, contact AIS Customer Service.) This clip attaches to the grid without penetrating the ceiling. The ceiling channel bolts to the clips. Ceiling tiles can be either flush or recessed. The ceiling track is designed to accommodate any height ceiling from 8' high to 11' high with standard Matrix stack frames and connectors. The ceiling track is designed to allow for installation on unlevel floors and ceilings without custom tile cutting on site. As ceilings can range from 8' to 11' in any random increment, Matrix is restricted to 8" increments of height. The ceiling track is designed to expand to 8.7", thus allowing for any standard stack combination to be attached to the ceiling.

There are two installation configurations which accomplish this coverage of ceiling heights. Certain ceiling heights will require a top kit extrusion package with a specific combination of stack frames. Other ceiling heights will require a full kit extrusion package. The top kit uses a two piece extrusion to attach to the ceiling. The full kit adds a third piece to extend the range of the adjustment. The below chart indicates the kit to use for which ceiling height, with minimum to maximum ceiling ranges for each scenario. Prior to specification, customers must supply dimensions from the floor to the ceiling grid along the footprint of the floor to ceiling frames. Use these dimensions to tell you which ceiling track kit, as well as what combination of base frames and stacks, to use. See below.

Detail A 8'	Detail B 8' 6"	Detail C 9'	Detail D 9' 6"	Detail E 9' 9"	Detail F 10'	Detail G 10' 6"	Detail H 10' 9"	Detail I 11'

11'	10' 10 1/2"	11' 2 3/8"	82"	0	0	2	Top

Once a ceiling height range has been determined, top channel kits or full channel kits can be specified for the tops of Matrix stack frames. Channel kits are available from 24" long to 114" long in 6" increments. Channel kits should be specified to match the linear footprint of the Matrix panels in a run. Channels can "span" more than one panel, up to 114". Thus a run of three 48" panels might be covered with one 8' (96") channel section and one 4' (48") channel section. Generally, longer channel kits are desirable to eliminate superfluous seams between channels.

Product Detail 2
FIT Shrouds

In addition to Channel kits, AIS FIT requires shroud kits to be specified at seams and junctions of channel kits such as 2-way 90° conditions, 3-way 120° conditions or a simple straight 180° join. Furthermore, certain conditions that include floor to ceiling (FTC) frames connected to low non-FTC frames require not only a shroud kit but a special HiLo trim. Shroud kits are specified as top channel shroud kits or full channel shroud kits to correspond to the top and full channel kits. For example, all shroud kits on an installation requiring full channel kits will require full shroud kits.

Additionally, shroud kits are specified by the type of intersection of frames. Thus, there is a 2-way 90° top shroud kit, as well as a 2-way 90° full shroud kit. For ease of specification, kits have been labeled A through S for both top and full kits. The below chart indicates what type of kit to use for each intersection of frames.

Shroud Kit A
Rounded 2-Way
Equal Height

Shroud Kit B
Low Right

Shroud Kit C

Shroud Kit R
135° Low Left

Shroud Kit S
135° Low Right

Matrix FIT Product Details

Product Detail 3 FIT HiLo Trim

Shroud kits do not include HiLo trim. FIT HiLo's must be specified separately. FIT HiLo's are different from standard Matrix HiLo's. They have a flat profile which is designed to aesthetically blend the flat profile of the ceiling track with the radius topcaps of the Matrix frames below. FIT HiLo trim covers are specified like standard HiLo's via the delta of the high frames to the low frames. Thus an 82" frame with a 24" stack attached to the ceiling and connected to a 66" frame in a straight line would require a 40" FIT HiLo trim cover (82+24-66), not a standard HiLo trim cover. See below.

Steps to Specify AIS FIT

- Determine ceiling grid type.
- Determine ceiling height along footprint of floor-to-ceiling frames.
- Determine what frames and stacks frame heights are required using FIT Figure 1.
- Determine which type of channel kit and shroud kit is required, either top kit or full kit, using FIT Figure 1.
- Lay out channel kits on footprint of frames to be attached to the ceiling.
- Lay out shroud kits on footprint of intersections between channel kits.
- Lay out FIT HiLo's where any low panels are connected to any floor-to-ceiling frames.

Product Detail 4 FIT Rules for Stability and Safety

AIS Matrix frame configurations using FIT floor-to-ceiling channels follow the same rules for stability when hang on components are used. When hang on components are not used, AIS Matrix with FIT channels must follow the rules laid out on the next two pages. All panels shown below are attached to the ceiling using FIT channels, as indicated by the black "channels" at the top of the panel symbols. Low panels "do not count" for stability purposes using FIT.

Product Detail 5
FIT Rules for Stability and Safety (Cont.)

Channel Retaining Clips = X

Fit Channel Kit =

Ceiling Tile Grid =

Incorrect Attachment: Channels are attached to perpendicular grid, allowing channel retaining clips to slide 90° to channel.

Correct Attachment: Channels are attached to parallel grid, preventing channel retaining clips from sliding 90° to channel.

Correct Attachment: Channels are attached to parallel grid and perpendicular grid, preventing channel retaining clips from sliding in either direction.

Matrix panel runs using FIT channels without perpendicular support, as outlined above, require a safety cable attaching the steel horizontal of the top stack frame to a ceiling joist. One cable per 12', minimum of two cables at each end of run. This cable is designed to prevent Matrix walls using FIT ceiling channels from tipping due to a catastrophic event such as an earthquake or horizontal impact at the base of the frames like a collision with a forklift. AIS does not supply cables or hardware. Cables and hardware are readily available at most hardware stores.

1. Ceiling Support Beam
2. Ceiling Tile
3. Ceiling clamps for 1/8" cable to secure loops
4. Hole must be cut in spacer extrusion, top extrusion, and ceiling tile to clear cable
5. 1/8" Thick Steel Cable
