CALIBRATE[®] COMMUNITY

Open Plan Benching Solution

AIS

POWER TO THE OPEN PLAN

Introducing Calibrate Community, a sophisticated and scalable benching solution that combines the substance of a private office, the warmth of residential furniture, and the convenience of the open plan.

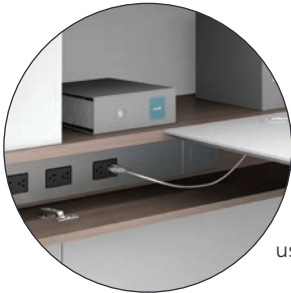

Designed by Bill Stewich (AIS), Calibrate Community uniquely expands the popular Calibrate laminate Series into the open plan with dimensional diligence, finish integration, and user convenience.

Whether designed for small teams or large departments, Community easily supports a wide range of user needs and group requirements. With multiple height and width options, along with effortless integration with other AIS products, Community naturally defines user space, creates borders, and can punctuate a floorplate with its changing topography.

Upper and lower storage elements help establish boundaries and manage access to teammates without the need for panels or walls.

Options include three benching (spine) heights along with fixed or height adjustable tables with screens or modesty panels.

Community carries power conveniently to users and conceals cords with the flip of a panel.

Optional wireless charging power dock.

Community spine can be extended to create informal meeting space.

Available fall 2019 in all standard Calibrate Series laminates.
